

## MNC Marine - Worry Free IT

### Rent an IT systems that just works!

The most important requirements for an IT system today are that it must be reliable and always work. All people on-board must be able to focus on their core business!

MNC Marine has designed an IT system for customers that focus on the IT function instead of the technology. Together we develop the interface between your vessel and office as well as services and features.

Today, it is also important with system standardization. This allows that the crew to more easily move between the vessels and still find programs, files, printers, etc. Standardization is also important for the management and support.

MNC Marine also delivers VSAT, 3G-4G communications for land near traffic (25-nautic mile) and Fleet Management systems in co-operation with partners.

MNC Marine acts "one point of contact" for the ship's officers, the responsible officers do not need to call multiple vendors for help, MNC Marine support is available 24/7/365

MNC Marine has delivered IT systems for ships since 2007 and has a good understanding of the daily work on-board the ship.
