

MNC Marine Cloud

Synchronize your files and folders

Sending email with attachments between offshore and onshore computers has always been an issue for ships and other operators offshore.

MNC Marine's service MNC Cloud allows you to synchronize selected files and directories between your office / computer on the ship.

Data stored in a specific directory on your server, PC or Smartphone can be synchronized with folders on other servers, PCs or Smartphones. Different types of devices can be synchronized to each other. E.g. If you are a wage calculator in your company you can receive work lists automatically on your laptop or server, if you are a superintendent you can receive incident reports and pictures in your Smartphone etc.
